

**Epi-Week 1 Cases  
January 3 to 9, 2021**

*South Vancouver Island Inset*

*Greater Vancouver Inset*

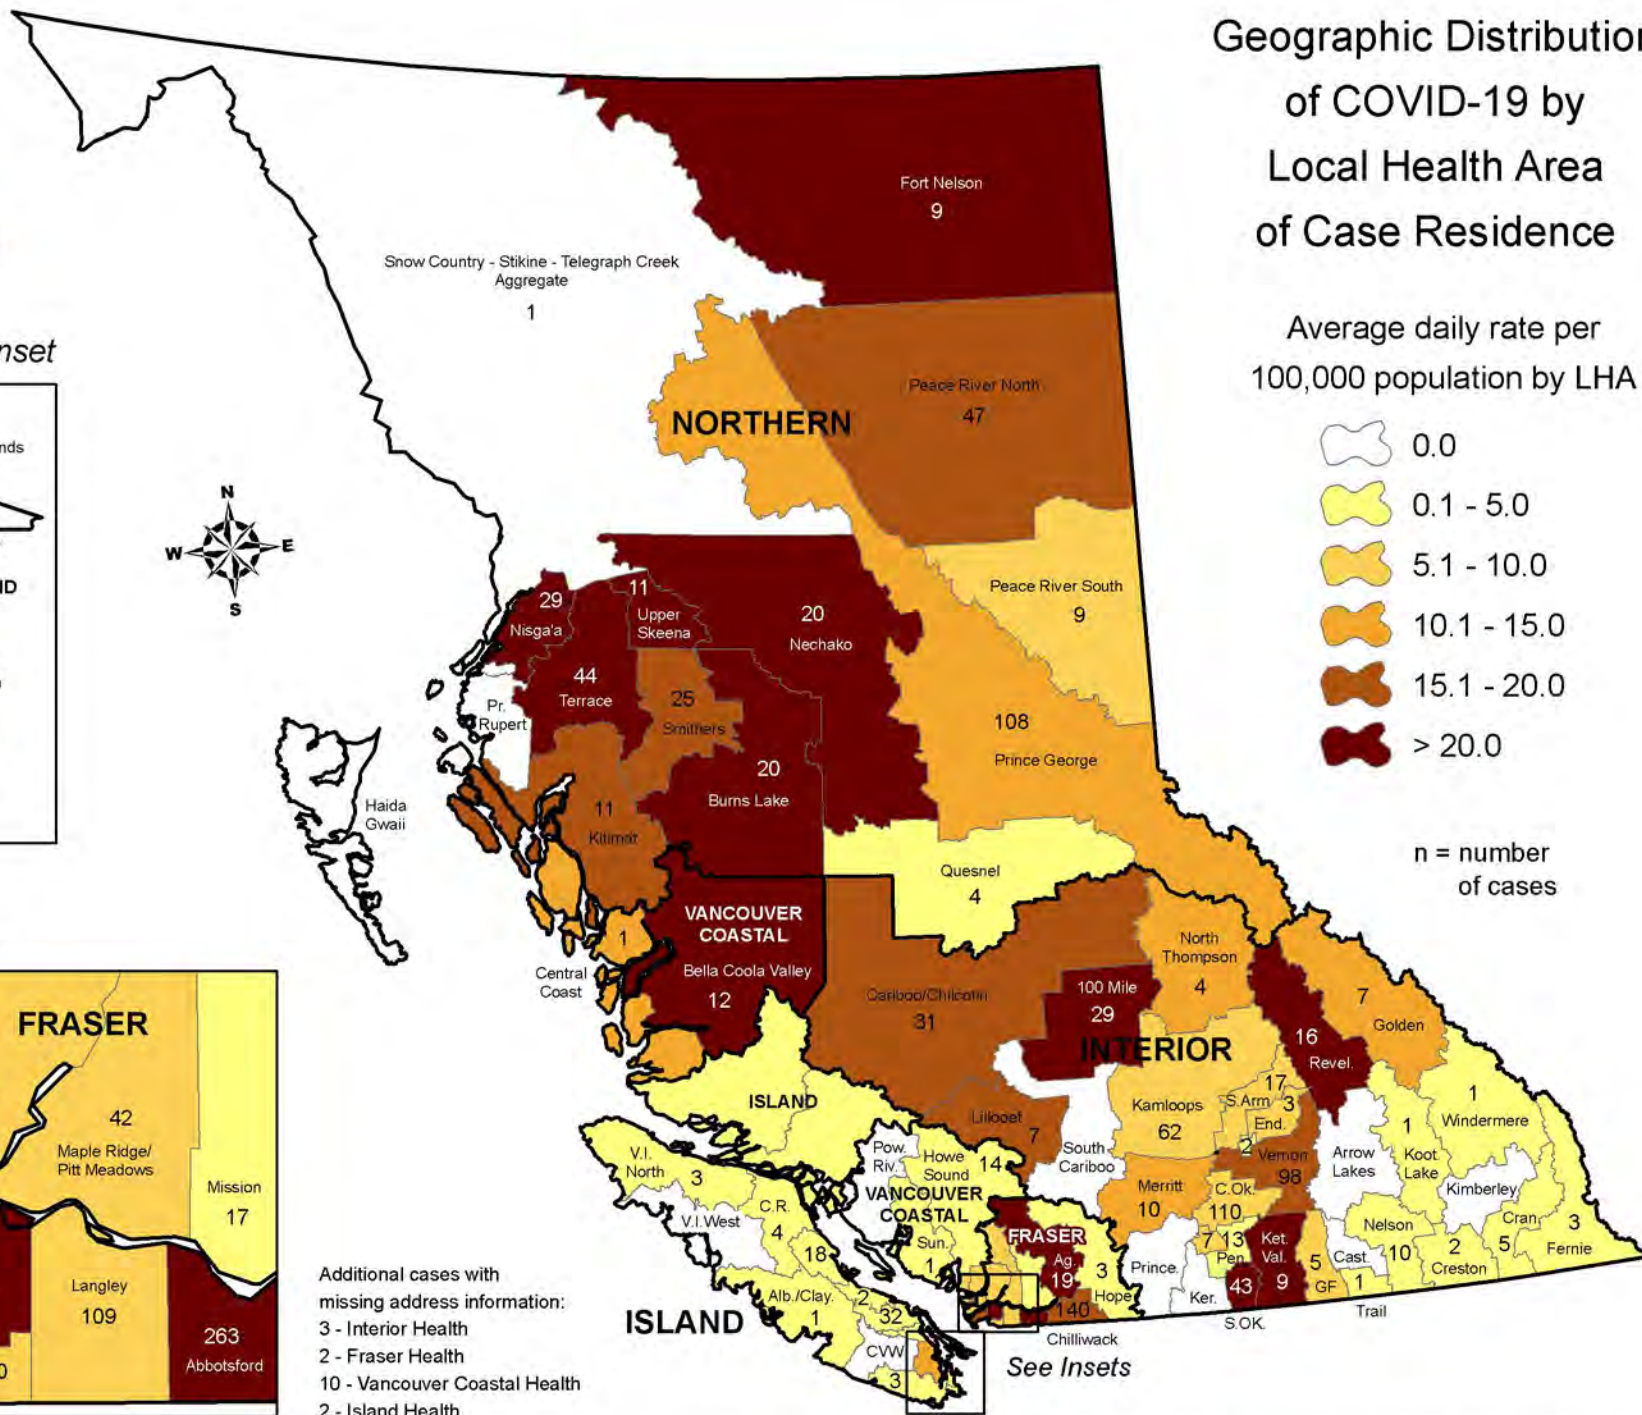

**Geographic Distribution  
of COVID-19 by  
Local Health Area  
of Case Residence**

Average daily rate per  
100,000 population by LHA

n = number  
of cases

Additional cases with  
missing address information:  
3 - Interior Health  
2 - Fraser Health  
10 - Vancouver Coastal Health  
2 - Island Health

Notes: Cases are mapped by location of residence; cases with unknown residence and from out of province are not mapped. Data source: the 5 regional health authorities of British Columbia; we operate in a live database environment and case information from the health authorities are updated as it becomes available. How to interpret the maps: The map illustrates the geographic distribution of reported cases for the most recent epidemiological week (from Sunday to Saturday). Local Health Areas (LHA) with higher rates are illustrated in darker colour shading. The number of reported cases appears in each LHA. Note that the number of cases in the LHA may not represent the location of exposure (e.g. people who acquired disease while traveling or working elsewhere), and that not all COVID-19 infected individuals are tested and reported; the virus may be circulating undetected in the community, including in areas where no cases have been identified by public health. Map created January 15, 2021 by BCCDC for public release.

of Case Residence**

*South Vancouver Island Inset*

*Greater Vancouver Inset*

Average daily rate per 100,000 population by LHA

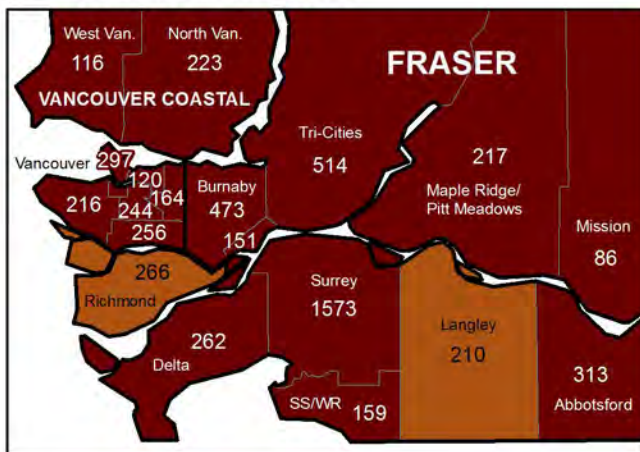

n = number of cases

Additional cases with missing address information:  
8 - Interior Health  
4 - Vancouver Coastal Health  
2 - Island Health  
1 - Northern Health

Notes: Cases are mapped by location of residence; cases with unknown residence and from out of province are not mapped. Data source: Public Health Reporting Data Warehouse (PHRDW) integrated COVID dataset; we operate in a live database environment and case information from the health authorities are updated as it becomes available. How to interpret the maps: The map illustrates the geographic distribution of reported cases for the most recent epidemiological week (from Sunday to Saturday). Local Health Areas (LHA) with higher rates are illustrated in darker colour shading. The number of reported cases appears in each LHA. Note that the number of cases in the LHA may not represent the location of exposure (e.g. people who acquired disease while traveling or working elsewhere), and that not all COVID-19 infected individuals are tested and reported; the virus may be circulating undetected in the community, including in areas where no cases have been identified by public health. Map created August 11, 2021 by BCCDC for public release.
