

## **Sharing of HIV POCT Test Kits**

Test kits are assigned to a specific test location, and use is approved by the Health Authority partners as part of the overall Health Authority HIV Testing Implementation Plans.

**Sharing of test kits must be approved when the test location is set up or approved in advance by the Health Authority partners** to ensure that inventory is used appropriately, and that test providers are trained and meet Health Authority competency expectations.

Roles and responsibilities must be determined in advance to define inventory management of these kits, as they are included as part of the sharing test location inventory. As such, the person reporting the monthly inventory status must be aware of what inventory is where and how it has been used to ensure accurate reporting for this test location.

Please review the recommendations related to Mobile and Outreach locations to help guide these discussions.
