Max has questions about the COVID-19 vaccine. He calls his doctor for more information.

Getting vaccinated will protect Max’s family and community.

All of the COVID-19 vaccines will help protect Max from serious illness, hospitalization and death.

Max isn’t protected right away. It takes 2–3 weeks for his body to build immunity after his vaccine.

After his 1st or 2nd dose, Max might get side effects that will make him feel sick. If they don’t go away after a few days, Max calls his doctor or 8-1-1. None of the vaccines can give Max COVID-19.

Muscle or joint soreness

Pain, redness, itchiness or swelling right away and/or 7 days after

Tiredness or headache

Fever and chills

Nausea and vomiting

The person who gives Max his 1st dose will let him know how and when he will get his 2nd dose. This can be up to 16 weeks later.

After his first dose, Max continues to clean his hands often, wear a face mask and keep a distance from others. This protects him and his community until everyone is vaccinated.
