Key Terms

**Resident**: A person in care in a long-term care (LTC) home or in a registered seniors’ assisted living (AL) residence.

**Resident cohort**: Refers to a group of residents with the same diagnosis or suspected diagnosis. In the case of COVID-19, residents with a suspected or confirmed COVID-19 diagnosis, and residents without symptoms suggestive of COVID-19, can each be a respective resident cohort. Decisions regarding cohorting should be made in consultation with facility/residence director/administrator, medical health officer (MHO) or designate and client care leader.

Introduction

This document is intended to provide guidance and recommendations to the operators of all licensed LTC homes and registered seniors’ AL residences in B.C., including health authority-owned and operated facilities, as well as contracted affiliates and fully private operators, for the prevention and control of COVID-19. This guidance does not apply to correctional centres/facilities.

This is based on current scientific evidence about this disease. This guidance may change as new information becomes available. For COVID-19 variants of concern, recommendations for infection prevention and control (IPC) measures remain the same and should be strictly followed and reinforced. Refer to the BC Centre for Disease Control’s (BCCDC) COVID-19 Variants webpage for more information.

**Note**: Recognizing that seniors’ AL residences may have a regulatory level of care and service that differs from LTC homes, operators are advised to apply the measures outlined in this document to their facilities to the greatest extent possible.

**A COVID-19 preparedness checklist (Appendix A) has been developed to assist in implementing the guidance in this document.**

Individuals age 70 years and older, especially those with underlying chronic health conditions, are most at risk of a serious or fatal illness after contracting COVID-19. Preventing transmission of COVID-19 is essential to minimizing the risks for vulnerable LTC and seniors’ AL residents and for health-care workers (HCWs) and staff working in these sites.

---

1 This guidance does not apply to mental health and supportive recovery AL facilities and independent living facilities.
Operators are responsible for ensuring adequate training and ongoing engagement for HCWs and staff on updated IPC requirements as outlined in this document.

HCWs and staff (including all contractors and volunteers) are responsible for taking reasonable steps to protect their own health and safety and the health and safety of all other people in their workplace. In the context of COVID-19, this means HCWs and staff are responsible for their own personal self-care, which includes frequent hand hygiene, following all IPC practice requirements and staying home when sick.²

**COVID-19 Vaccination**

Overall, approved COVID-19 vaccines in Canada are effective against SARS-CoV-2. We are continuing to learn about the impact that vaccines have on SARS-CoV-2 transmission and their effectiveness against certain variants of concern. As the evidence evolves, public health and IPC guidance for individuals who have received their COVID-19 vaccinations will be updated as needed.

Currently in health-care facilities, regardless of whether an individual (e.g., resident, HCW and staff, visitor) has received a COVID-19 vaccine, they must continue to follow processes for COVID-19 screening and managing COVID-19-like symptoms.

When providing care to residents, including those who are symptomatic, HCWs and staff must continue to conduct point-of-care risk assessments (PCRAs) and implement additional precautions as needed to prevent the transmission of SARS-CoV-2.

HCWs and staff will confirm resident’s COVID-19 vaccination status and offer vaccine, as indicated (e.g., second dose, booster doses), at the earliest opportunity. Resident’s may connect with their care team if they have any questions about COVID-19 vaccination opportunities.

---

All HCWs and staff in LTC and seniors’ AL facilities must follow vaccination related requirements in accordance with orders and/or policies from the provincial health officer, their regulatory college and their employer.

Visitors are required to comply with immunization related requirements as per the Ministry of Health – Overview of Visitors in Long-Term Care and Seniors’ Assisted Living guidance. For further information, please see the following resources:

- National Advisory Committee on Immunization’s (NACI): Recommendations on the use of COVID-19 vaccines
- BC Centre for Disease Control’s (BCCDC): Monitoring vaccine update, safety and effectiveness (March 30, 2021)
- BCCDC getting a vaccine

Infection Prevention and Exposure Control Measures

To prevent and control transmission of COVID-19 in LTC and seniors’ AL settings, the following IPC measures are required:

1. Infection Prevention and Exposure Control Measures

Please refer to the Hierarchy for Infection Prevention and Exposure Control Measures for Communicable Diseases for information on IPC measures that can be taken to reduce and eliminate the transmission of infectious diseases.

Wherever possible, re-organize work processes within the facility to designate teams of staff to specific units or cohorts of residents. If dedicated teams or staff for ill resident areas are not an option, HCWs and staff must take additional care to follow all IPC guidelines when providing care to both COVID-19 positive, symptomatic and negative clients. Train staff, families, visitors and residents on appropriate IPC measures. Monitor for compliance and take immediate corrective action when needed.

For LTC homes, ensure the availability of single rooms with private toilets. If single rooms are not available, use physical partitions to establish at least two metres of physical distance or physical barriers between residents.
2. Screening

Passive Screening (Signage)
Post signs at all facility entrances outlining the current visitor restrictions in place. Post signs in multiple languages at all entrances reminding people not to enter if they are sick or if they are required to self-isolate in accordance with public health directives.

Active Screening (Managing Facility Entry Points)
Prevent all individuals who are sick from entering the building. Ensure all HCWs, staff, contractors, visitors and others are screened for symptoms of COVID-19 at all times people may be entering the facility. Post a staff member at the designated entry point(s) to actively screen every person.

Develop and implement an appropriate script and process for active COVID-19 screening at the entry point for symptoms and risk factors of COVID-19 (see BCCDC COVID-19 entrance screening tool for health-care facilities) and communicable respiratory illness. Physical distancing supports for screeners are recommended, including spacing markers on the floor (two metres apart) and transparent barriers that prevent droplet transmission.

Maintain a daily list of all staff and visitors entering the facility, including their contact information.

Screening of Staff
All HCWs and staff must be actively screened. Supervisors must ensure all HCWs and staff have been screened for symptoms of COVID-19 and communicable respiratory illness prior to every shift. Screening must take place at/near the designated facility entrance so that HCWs and staff do not have any interaction or close contact with residents and other workers prior to being screened.

The current list of COVID-19 symptoms is posted on the BCCDC website. See the COVID-19 entrance screening tool for health-care facilities for more information.

Staff must actively self-monitor for symptoms associated with COVID-19 and communicable respiratory illness.

Staff must follow the safety measures described in the COVID-19 health-care worker self-check and safety checklist.
HCWs and staff who have any questions or concerns regarding possible exposures or symptoms are advised to call their local public health unit and/or their workplace health and safety department for assessment and advice. Information regarding risk assessment of HCWs and staff exposed to COVID-19 while at work as well as guidance to support decision-making on the recommended self-isolation period, return to work for HCWs with or without symptoms of COVID-19 is available here.

Screening of Visitors

LTC and seniors’ AL facilities:
All visitors must be screened for signs and symptoms of COVID-19 and communicable respiratory illness prior to every visit.

Visitors with signs or symptoms of COVID-19, as well as those under additional precautions, in accordance with public health directives, shall not be permitted to visit. All visitors must sign-in when entering the facility (see Appendix B of this document).

Rapid Point-of-Care Testing
As an additional layer of protection in long-term care, all individuals, 12 years or older, visiting long-term care homes must undergo rapid COVID-19 antigen testing, in the form of a rapid antigen test. Individuals that test positive will not be permitted to enter the site and will be instructed to self-isolate and refer to the BC Centre for Disease Control (CDC) guidance for further direction. Individuals refusing to consent to a rapid antigen test will not be permitted to enter the site.

Individuals 11 years or under are not required to undergo rapid antigen testing. Individuals providing compassionate visits related to end-of-life will also not be required to undergo rapid antigen testing given the critical timeliness and nature of the visit.

In alignment with BC Centre for Disease Control guidance, it is recommended that frequent and regular visitors not undergo rapid antigen testing more than three times in one week. Facility operators/screeners should maintain a record of rapid antigen testing of frequent and regular visitors in support of a testing schedule for those individuals. Repeated rapid antigen testing is not required for visitors who leave the facility and return the same day.

Visitors to standalone seniors’ assisted living residences are not required to undergo rapid antigen testing. Available rapid antigen tests can be used on a voluntary basis to test visitors, at the discretion of the operators.
If a seniors’ assisted living residence is part of a campus of care with long-term care where there is a common entrance and/or hallways, visitors (12 years of age or older) to seniors’ AL may be required to undergo rapid antigen testing, as described above in the requirements for LTC homes.

Residents

LTC facilities:
All residents must be actively screened for new respiratory and gastrointestinal symptoms. See BCCDC COVID-19 patient screening tool for health-care facilities for more information.

All residents should be monitored for new or worsening symptoms (see symptoms of COVID-19), at least once per day. Temperature checks for clinical use and resident care should be carried out per according to the organization’s policy.

Seniors’ AL residences:
Encourage residents to self-monitor for COVID-19 symptoms and get tested in accordance with provincial testing guidelines.

Implement a process to ensure all residents are assessed at least daily about COVID-19 symptoms, including fever. Identify a point-of-contact for residents to notify (e.g., someone to phone) if they develop symptoms.

Lab Testing of Residents
Residents who meet the BCCDC’s viral test presentation definitions are considered possible cases and should be tested for COVID-19 in accordance with the BCCDC COVID-19 testing guidance.

If a resident is suspected of having COVID-19:
LTC Homes:
If COVID-19 is identified or suspected in a resident (e.g., resident reports fever or symptoms compatible with COVID-19), immediately isolate the resident in their room and follow public health guidance regarding testing and notification requirements. All residents suspected of having COVID-19 should be reassessed at a minimum of twice daily to detect additional signs or worsening symptoms.

Implement droplet and contact precautions (see personal protective equipment (PPE)) and continue doing a PCRA prior to any interaction with a resident (see PCRA section on the BCCDC website). Place the resident in a single bed room, if possible (see the placement and accommodation section in this document), and post droplet and contact precautions signs on...
the door of the resident’s room. Notify the facility resident’s care leaders (e.g., director of care, medical director, site manager) and test the resident for COVID-19 in accordance with provincial testing guidelines. Inform environmental services of the need for enhanced cleaning in the resident’s room and provide meals within the resident’s room while awaiting test results, if possible.

Notify the resident’s primary care provider to determine if further assessment or treatment is required and the resident’s family, substitute decision maker or next-of-kin about the potential need to set or modify orders from the primary care provider. Ensure the facility’s medical director or site manager is aware of the pending test result and the resident’s goals of care.

Set up a PPE station/cart outside the resident’s room. Ensure all staff entering the resident’s room follow routine practices and droplet and contact precautions, including using appropriate PPE and practicing rigorous hand hygiene. Maintain an increased level of surveillance of other residents and for any staff with symptoms consistent with COVID-19.

Seniors’ AL Residence:
If a resident develops COVID-19 symptoms, they should self-isolate in their suite. Staff should try to interact directly with residents if feasible. If this is not feasible, staff can follow up with residents via phone or through the facility intercom system. Where applicable, follow the above section’s guidance for LTC homes/residents suspected of having COVID-19.

3. Point-of-Care Risk Assessment

Prior to every resident interaction, staff must complete a PCRA to assess any infectious risks posed by a resident, situation or procedure to themselves, the care provider, and others. The PCRA helps HCWs select the appropriate actions and PPE required to minimize their risk of exposure to known and unknown infections for a specific interaction, a specific task, with a specific resident and in a specific environment.

The PCRA is based on judgment (e.g., knowledge, skills, reasoning and education), as well as up-to-date information on how the specific health-care facility has designed and implemented appropriate physical (engineering) and administrative controls, and the use and availability of PPE. See BCCDC COVID-19 patient screening tool for direct care interactions and routine PCRA tool for guidance on conducting a PCRA.
4. Hand Hygiene

Hand hygiene sinks, liquid soap dispensers, paper towel holders, alcohol-based hand-rub (ABHR) dispensers, waste bins and related supplies should be readily available throughout the facility. Hand sanitizer dispensers should be available in hallways at the entry to each resident room or suite, in communal areas and at the point-of-care for each resident. Where easily accessible ABHR poses a resident risk, alternate hand hygiene products (e.g., personal sized ABHR) should be provided for HCW use.

Post signs around the care home/residence to promote and guide proper hand washing by residents, staff and visitors. ABHR with at least 70% alcohol content should be readily available to residents, staff and visitors at all facility entry and exit points, common areas, resident units and at the point-of-care in each resident’s room. Ensure sinks are well-stocked with plain soap and paper towels for hand washing. Antibacterial soap is not required for COVID-19 prevention.

Ensure other supplies, including disinfecting wipes, tissues and waste bins are available as required at point-of-use. Encourage all residents to perform hand hygiene where physically and cognitively feasible. If residents are unable to perform hand hygiene, provide assistance as necessary. Promote and reinforce the importance of diligent hand hygiene and proper hand hygiene technique with staff, families and visitors on an ongoing basis.

Staff, residents and visitors must perform diligent hand hygiene at the following moments:

- When hands are soiled
- Before and after touching others
- After using the toilet
- Before and after handling food and eating
- After personal body functions, such as oral care
- Before and after handling medications
- After sneezing or coughing
- When entering or leaving resident rooms

In addition, all staff must clean their hands:

- At the beginning of the workday
- Before preparing or serving food
- After removing each individual piece of PPE, and before putting on new PPE
- Before and after contact with a resident or their environment, even while wearing gloves,
- Before performing an aseptic procedure
Before moving from a contaminated to a clean part of a resident's body during care
Before assisting residents with feeding or medications
After contact with body fluids
Immediately after removing gloves

5. Respiratory Etiquette

Post signs in the home/residence to encourage and guide residents, staff and visitors to follow proper respiratory etiquette. Ensure an adequate supply of tissues and waste baskets are available for use by residents, staff and visitors.

Encourage residents to perform respiratory etiquette (e.g., coughing into their elbow, using tissues, disposing tissues into a proper waste bin and performing hand hygiene immediately after), where physically and cognitively feasible. Promote and reinforce the importance of diligent respiratory etiquette with staff on an ongoing basis.

6. Cleaning and Disinfection

**Equipment:**
Have cleaning and disinfecting wipes available for cleaning and disinfection of non-critical resident care equipment close to point-of-use.

Identify which staff are responsible for cleaning resident care equipment and inform them about all required duties.

Dedicate reusable equipment and supplies specifically to individual residents with suspected or confirmed COVID-19 infections.

If dedicating equipment and supplies to an individual resident is not possible, all reusable equipment that is shared between multiple residents must be cleaned and disinfected with a hospital-grade disinfectant after each use. Always follow the manufacturer’s instructions for dilution, contact times, safe use and materials compatibility of all cleaning products. Items that cannot be easily cleaned and disinfected should not be shared among residents.

Discard all single-use items into waste bins after use.

**Environmental cleaning/laundry/waste management:**
Please see the BCCDC’s [environmental cleaning and disinfectants for clinic settings](#) and the [information sheet for environmental service providers in health-care settings](#) for guidance on environmental cleaning, laundry and waste management.

### 7. Food Service Delivery and Pick Up

**Delivery and pick up:**
If there are suspected or confirmed cases of COVID-19 in the facility, serve those residents individual meals in their rooms while ensuring adequate monitoring and supervision of those residents. If in-room meal service is not possible, serve asymptomatic residents first, clean the dining area, and then serve symptomatic residents.

Food services staff should not enter dedicated COVID-19 cohort units or rooms with residents with suspected or confirmed COVID-19. Leave food trays outside the unit/room and notify resident care staff (in this situation, a process needs to be in place to ensure that all affected residents have received their meals). Use regular, reusable food trays, dishes and utensils for all residents. Disposable dishes are not required.

Staff must clean their hands prior to delivering food trays and after leaving resident areas, units or floors when delivering and picking up food trays. Gloves are **not** required when delivering or picking up food trays. However, if gloves are being worn, staff must change gloves prior to leaving COVID-19 units, as well any time hand hygiene is indicated. Proper hand hygiene must be performed after removing gloves.

**Food carts:**
DO **NOT** bring food carts into resident rooms. In addition, DO **NOT** transport food on carts that have used dishes on them (e.g., carts used to deliver meals cannot be used to pick up used dishes at the same time).

Regularly clean and disinfect carts used for transporting food between meal service and after picking up used dishes. Clean and disinfect cart handles before entering and after leaving each resident area, unit or floor.

**Indoor activities:**
Indoor activities and events may include residents and staff across units of a facility, but may not include visitors. Outdoor gatherings may include fully vaccinated family and friends who have met the requirements for visitors for the setting (e.g., no
symptoms of illness, rapid POC testing, masking), provided current public health guidance, site safety plans, and infection prevention and control practices are followed. Residents may also leave the facility for outings and family visits, and there are no requirement for residents to isolate or undergo rapid POC testing upon return.

**Communal dining:**
All residents and staff may participate in communal dining. Pre-place utensils and cutlery for residents prior to seating and remove self-service food items and shared food containers (e.g., water/coffee/cream/milk dispensers, salt and pepper shakers) from communal areas. Provide single-use condiment packages (e.g., salt, pepper, sugar, ketchup and mustard) directly to residents. Dispense shared food items for residents.

Visitors seeking to participate in communal dining with a resident should contact the facility and request permission ahead of time. Visitors dining with a resident should attempt to sit at a separate table from other residents, and follow the same IPC practices as residents/staff.

Ensure ABHR with at least 70% alcohol content is available in shared dining rooms. Remind residents to perform hand hygiene before handling or eating food.

**Food sharing:**
Staff and HCWs should not have buffet-style potluck gatherings, where multiple people are handling and serving food in close proximity or handling and serving food from common, unsupervised serving dishes/containers. Staff and HCWs may use food items that are individually packaged (e.g., creamer cups, sugar packets, crackers, pre-packaged granola bars).

Shared food items (e.g., candy, cookies, chocolate, nuts, fruit) should not be located in the staffing work space. Staff are discouraged from taking part in communal/shared food.

Visitors may wish to bring a favorite food for their loved one. Visitors should be provided with appropriate information on safe food practices, such as protecting foods from contamination, minimizing direct handling of food, preventing cross-contamination of foods and discarding food that may have been contaminated with coughs or sneezes. Please see the BCCDC’s food safety webpage for more information related to food safety.

Visitors must confirm with facility staff regarding any dietary considerations before bringing in food for the resident (e.g., allergies, diabetes, choking hazard or swallowing difficulties). Food
should be individually packaged for consumption by the resident. Visitors and residents should be reminded to perform hand hygiene before and after handling food or eating.

Please see BCCDC COVID-19 information sheet for food service providers in health-care settings for guidance about PPE for food services in health-care facilities, as well as information on food handling, dishwashing, food delivery and tray pick up.

8. Residents with Suspected or Confirmed COVID-19

**NOTE:** If an outbreak has been declared at a facility, operators must implement the COVID-19 Outbreak Management Protocol for Long-Term Care and Seniors’ Assisted Living Settings immediately.

Immediately place any resident with new-onset respiratory or gastrointestinal symptoms (e.g., new or worsening cough, sneezing, runny nose, fever, sore throat, difficulty breathing or episodes of vomiting and/or diarrhea) in a single room with a private toilet and sink.

If a single room is not available, maintain a physical separation of two metres between the bed space of the ill resident and all roommates. Provide a designated commode chair for the resident’s use. Where available, close the privacy curtains.

Implement droplet and contact precautions and use appropriate PPE when in direct contact with the resident. Please see BCCDC COVID-19 patient screening tool for direct care interactions and routine PCRA tool for more information.

**Post signage outside the resident’s room/space** indicating the required additional precautions and set up a PPE station outside of the resident’s room. Post signs with instructions on how to put on and remove PPE (e.g., donning and doffing) inside and outside of the resident’s room.

Restrict the resident to their room or bed space, including during meals and any other clinical or social activities, unless absolutely necessary. Designate reusable equipment to the resident with suspected or confirmed COVID-19, if possible.

For LTC homes with residents in shared rooms, if practical and possible, move non-affected roommates of resident with symptoms related to COVID-19 to a separate private room for additional precautions, then monitor the roommates for symptoms. If a separate private room is not available, maintain a physical separation of two metres between all beds in the current room and close any privacy curtains.
In the rare circumstances where a resident with COVID-19 symptoms must leave their room, they should wear a medical mask (if tolerated) or use tissues to cover their mouth and nose. Assist residents in performing hand hygiene. Encourage residents to use respiratory etiquette. Residents should minimize touching surfaces or items outside of their room. Immediately clean and disinfect any surfaces touched by the resident while outside of their room.

Cohorting of residents with suspected or confirmed COVID-19 may be used where practical and should only be considered once other infectious causes have been ruled out and upon consultation with IPC and/or MHO. Designated COVID-19 rooms/units should not be located close to vulnerable residents (e.g., residents with compromised immune systems or underlying health conditions).

**Staff cohorting:**
- Where practical, consider dedicating teams of staff to care for residents with suspected or confirmed COVID-19. To minimize the risk of the transmission of infection in the building, consider re-organizing the workflow to limit the movement of staff between units/floors. Provide training for staff in how to care for COVID-19 residents. It is recommended to maximize the number of services delivered during a single resident interaction and minimize the number of times staff enter/leave the resident area during their shift. Minimizing the number of staff who care for residents with confirmed or suspected COVID-19 is also recommended. Designate staff to specific units or cohorts of residents, whenever feasible.

**9. Admissions and Transfers**

Vaccination status will be determined prior to any admission, or interfacility transfer to a LTC or seniors’ AL residence. Screen residents for new respiratory and gastrointestinal symptoms upon admission, see BCCDC COVID-19 patient screening tool for health-care facilities for more information. All unvaccinated individuals being admitted into a care facility should be monitored for symptoms for 10 days upon arrival. This includes admissions from acute care, community, transfer from other facilities and those receiving in-facility respite care.

Moving residents who are using a continuous positive airway pressure (CPAP) or bilevel positive airway pressure (BIPAP) machine within a facility should be avoided.
Residents with confirmed or suspected COVID-19 infection:
Residents with confirmed or suspected COVID-19 infection should remain in their room unless there is essential need for movement and/or transport. Transfers within and between buildings should be avoided unless medically indicated. Call the receiving treatment facility (e.g., dialysis clinic) ahead of time to review and discuss the transfer.

Residents with suspected or confirmed COVID-19 who require urgent medical attention and transfer to an acute care facility should wear a medical mask during transport through the facility and during the transfer to hospital, if tolerated. Call the receiving unit, physician and/or MHO (or designate) to review and discuss the transfer. Notify the ambulance dispatch and the receiving institution about the resident’s known or suspected COVID-19 status ahead of transport.

Personal Protective Equipment

10. Access to and Distribution of Personal Protective Equipment
LTC and seniors’ AL health-care providers requiring PPE have direct access through established health authority supply contacts. Supply requests are assessed based on need, urgency and availability of supply and are filled accordingly. Distribution mechanisms may vary across health authorities. For more information, please visit BCCDC’s PPE webpage.

11. Personal Protective Equipment Use
Always use PPE in combination with frequent hand washing using plain soap and water or ABHR with a minimum of 70% alcohol content. Where PPE is used, the employer must train, test and monitor staff compliance to ensure vigilant donning (putting on), wearing and doffing (removing) of PPE.

Monitor and safely secure PPE stock, while still ensuring staff can access PPE when needed. Whenever possible, PPE should be accessible and available at the point-of-care for each resident.

12. Mask and Eye Protection Use

Visitors: All visitors in LTC and seniors’ AL facilities must adhere to medical mask requirements as outlined in the Ministry of Health – Overview of Visitors in Long-Term Care and Seniors’ Assisted Living guidance.
**HCWs (clinical and non-clinical staff):** All HCWs in LTC and seniors’ AL facilities adhere to medical mask requirements in accordance with [B.C. Ministry of Health Policy Communiqué: Mask Use in Health-Care Facilities during the COVID-19 Pandemic](#).

Medical masks should be changed if the mask becomes wet, damaged or visibly soiled.

**Extending the use of PPE during the COVID-19 pandemic:**

Extending the use of PPE conserves the overall PPE supply and supports the continued safe delivery of care during the COVID-19 pandemic.

**Extended PPE use includes:**

- Wearing the same medical mask and eye protection for repeated, close contact encounters, unless damaged or visibly soiled.
- Wearing the same eye protection, gown and mask for repeated close encounters with residents where there is a known diagnosis of COVID-19.
- Doff and dispose/clean and disinfect PPE and don a new set when moving from residents with COVID-19 to those not diagnosed with COVID-19.
- Changing PPE if moving between residents on additional precautions for non-COVID-19 reasons (e.g., airborne, droplet, or contact).
- Cleaning and disinfecting eye/facial protection when visibly soiled and when leaving the care area (e.g., at the end of each shift, during breaks or mealtimes).

**When using PPE always:**

- Change gloves between residents, accompanied by hand hygiene between each glove change.
- Change medical mask if the mask becomes wet, damaged or soiled or when leaving the facility.
- Practice hand hygiene after removing each individual piece of PPE and before putting on new PPE.

**Signage to guide PPE use:**

- Post signage for [droplet and contact precautions](#) outside the room/space of residents who are suspected of having or have been diagnosed with COVID-19.
- Post signs at appropriate locations with [instructions on how to put on (don) and take off (doff) PPE](#).
- Post signs at appropriate locations on [how to wear a medical mask](#).
- Post instructions at appropriate locations on how to [clean and disinfect eye and facial protection](#).
13. Droplet and Contact Precautions

Staff should follow droplet and contact precautions when entering COVID-19 units or rooms on droplet and contact precautions (e.g., rooms where residents diagnosed with confirmed or suspected COVID-19 have been admitted). PPE for droplet and contact precautions includes gloves, gown, eye protection and a medical mask.

Use an N95 respirator or equivalent and eye protection (e.g., goggles or face shield), gloves and a gown for AGMPs performed on residents with suspected or confirmed COVID-19.

In LTC and seniors’ AL settings, AGMPs on residents with suspected or confirmed COVID-19 should only be performed when medically necessary. If an AGMP is performed, ensure the fewest number of staff necessary to perform the procedure are present.

Follow and implement all additional measures ordered by the MHO or outlined in health authority guidelines to minimize risk.

Access to additional PPE, such as respirators, will be provided in circumstances where a HCW determines there is elevated risk of COVID-19 transmission through resident interaction, as indicated by the PCRA.

14. Discontinuation of Droplet and Contact Precautions

A health care professional, such as a physician or a nurse, should assess the clinical status of the resident for resolution and improvement of symptoms related to COVID-19 and follow the criteria below to determine if discontinuation of droplet and contact precautions is indicated.

These decisions should be made in consultation with the resident’s most responsible care provider, IPC professional and/or MHO.

Resources:
- Interim guidance: Public health management of cases and contacts associated with novel coronavirus (COVID-19)
- Information about self-isolation.
Public Health Measures

15. Provincial Health Officer Orders

By law, regional health boards, MHOs, operators, contractors, staff, service providers, educational institutions, students and volunteers must comply with all orders from the Provincial Health Officer.

16. Laboratory Testing

Review the latest BCCDC’s COVID-19 testing guidelines prior to any testing. Note: COVID-19 cases in LTC populations are known to occur in residents with mild presentations.

Ensure that the correct swabs and collections systems are ordered and being used. Please see appendix C of this document for instructions on how to collect a nasopharyngeal swab.

17. Notification & Reporting

Notify IPC or designate at the home/residence regarding all residents, care providers, staff, volunteers or visitors with symptoms related to COVID-19.

The IPC or designate at the home/residence must notify public health of all residents, care providers, staff, volunteers or visitors confirmed to have COVID-19 or follow the recommended direction for reporting from the local Medical Health Officer or their designate. The director of care or site manager should call the communicable disease unit at their local public health unit.

18. Outbreaks and Enhanced Monitoring/Surveillance

An outbreak may be declared at the direction of the MHO or their official designate. A COVID-19 outbreak will not be declared solely on the basis of cases diagnosed among residents or HCWs and staff.

There may be circumstances where the cases of COVID-19 at a LTC/AL facility do not meet the threshold for an outbreak but enhanced monitoring/surveillance and implementation of additional measures to prevent transmission are deemed appropriate by the MHO (e.g., severity of illness amongst vaccinated residents suggests circulation of a variant that causes more severe illness or a facility with low COVID-19 vaccination coverage amongst residents).
If an outbreak has been declared at a LTC or AL facility, operators must implement the COVID-19 Outbreak Management Protocol for Long-Term Care and Seniors’ Assisted Living Settings immediately.

19. Contact Tracing and Close Contacts

All residents who share a room with an ill resident with suspected/confirmed COVID-19 should be considered exposed and monitored for symptoms at least twice a day for 10 days from the last date of exposure. For further information on management of residents who are close contacts, refer to the COVID-19 Outbreak Management Protocol for Long-Term Care and Seniors’ Assisted Living Settings.

Report any new symptoms to the area MHO or their designate and follow BCCDC guidance regarding health-care worker exposures to COVID-19 while at work. For staff exposed to COVID-19 outside of work, follow BCCDC guidance for the management of cases and contacts associated with novel coronavirus in the community.

20. Managing Deceased Persons

Follow BCCDC guidance for the safe handling and care of deceased persons with suspected or confirmed COVID-19.

21. Psychosocial Supports

Support for residents:

The implementation of IPC measures may adversely affect the mental health and psychological well-being of residents. Prevention measures may lead to behavioural and non-compliance issues. Some residents may become more agitated, stressed and withdrawn during an outbreak or while under additional precautions, and may require mental health and psychological support.

Support and facilitate virtual social connections if in-person visits are not possible. Where personal electronic devices (e.g., tablets, phones) are used to support virtual communication and social interactions during the pandemic:

- Ensure mobile devices are dedicated to a single resident;
- Ensure mobile devices are cleaned after use. To avoid damaging electronics, follow the manufacturer’s instructions regarding cleaning products and technique; and
- Ensure residents and staff wash their hands regularly when using mobile devices.
Support the adoption and implementation of the World Health Organization’s mental health and psychosocial considerations during the COVID-19 outbreak for older adults.

Support for staff:
It is important to support the psychosocial well-being and resilience of staff. BCCDC has guidance on the adoption and implementation of health-care provider supports. Mental health support for health-care providers is available through Care for Caregivers.

An ethical analysis of the duty of HCWs to provide care in circumstances where there is a risk of harm to their own person is available online. Staff who have any questions or concerns regarding their possible exposure or symptoms are advised to call their local public health unit and/or their workplace health and safety department for assessment and advice.

Information regarding risk assessment of HCWs exposed to COVID-19 while at work as well as guidance to support decision-making on return to work for HCWs with symptoms of COVID-19 is available online.

Please see BCCDC’s COVID-19 health-care worker self-check and safety checklist for more information.

Visitors
Visitor guidance supports safe, meaningful visits in LTC and seniors’ AL settings while adhering to IPC requirements. The restrictions on visitation are grounded in regional/provincial health officer orders under section 32(2)(b)(ii) of the Public Health Act.

Please see the Ministry of Health – Overview of Visitors in Long-Term Care and Seniors’ Assisted Living guidance, available on the BCCDC website, for the latest information pertaining to essential and social visits.

22. Hairdressing and Other Services
All personal service providers entering LTC and seniors’ AL settings must be fully vaccinated. Proof of full vaccination (defined as seven days after receiving the full series of a World Health Organization (WHO) approved COVID-19 vaccine or a combination of approved WHO vaccines) will be required in order to enter a facility.
In addition, all service providers must follow all applicable WorkSafeBC communicable disease prevention protocols, including rigorous hand hygiene, practicing respiratory etiquette, and the cancellation of services if the service provider or client has symptoms. Additionally, all operators or facilities are asked to retain a list of every resident who has received services and when these services are provided.

Hairdressers and other service providers working onsite will develop and submit communicable disease prevention plans as described in WorkSafeBC’s guide, to the director of the facility, who will confirm the feasibility of the plan and work to determine the starting date. These plans will need to follow the guidelines within this document.

## COVID-19 IPC Preparedness Checklist for Long-Term Care and Seniors’ Assisted Living Facilities

### General IPC Measures

- Educate all staff about COVID-19.
- Develop a contingency plan for staff illness and shortages.
- Assign a staff member to coordinate pandemic planning and monitor public health advisories.
- COVID-19 posters and signage (e.g., hand hygiene, cough etiquette) placed at all entrances and in all common areas.
- Ensure alcohol-based hand sanitizer with at least 70% alcohol is available at multiple locations: entrances, reception counter, common areas and exits.
- When available, provide staff with small bottles of alcohol-based hand sanitizer with at least 70% alcohol.
- Maintain existing physical barriers if they do not impede operations (e.g., plexiglass partitions to separate visitors from reception staff).
- Replace cloth-covered furnishings with easy-to-clean furniture, where possible.
- Provide disposable tissues and no-touch waste receptacles in appropriate areas.
- Provide plain soap and paper towels in resident washrooms and at staff sinks.
- Where permitted by fire regulations, keep frequently used interior doors open to avoid recurrent door handle contamination.

### PPE and Mask Use

- HCWs should conduct a PCRA prior to any interactions with a resident or a visitor. See COVID-19 patient screening tool for direct care interactions & routine PCRA tool for more information.
- Ensure all visitors are wearing medical masks where required by the Ministry of Health – Overview of Visitors in Long-Term Care and Seniors’ Assisted Living guidance.
- Display PPE usage and donning (putting on) and doffing (taking off) instructions in locations available to all health-care workers.
- Implement droplet and contact precautions for direct care of residents with suspected/confirmed COVID-19.
  - If an airborne precautions sign is posted or an AGMP is being performed, ensure staff wear an N95 respirator, in addition to gown, gloves and eye protection.
- Always use PPE in combination with frequent hand washing using plain soap and water or an alcohol-based hand sanitizer with a minimum of 70% of alcohol content.
- Where PPE is used, operators must train, test and monitor staff compliance to ensure vigilant donning, wearing and doffing of PPE.
- Monitor and safely secure PPE stock to prevent theft and loss, while still ensuring staff and residents can access PPE when needed.
## Screening

- Put processes in place to identify and prevent individuals with suspected or confirmed COVID-19 from entering the facility:
  - Establish designated entrance points for all persons entering the facility to ensure all HCWs, staff, contractors, visitors and others are screened for symptoms of COVID-19 and communicable respiratory illness.
  - Develop and implement an appropriate script and process for active COVID-19 screening at entry points for symptoms and risk factors of COVID-19. See [BCCDC COVID-19 entrance screening tool for visitors, patients & staff](https://www.bccdc.ca) for more information.
  - During business hours, post a staff member at all entry points to actively screen every person who enters the building.
  - Outside of business hours, implement a comparable process to screen and log all people entering the building.
  - Ensure a process is in place at the facility entrance to instruct individuals on required PPE use and related infection control practices according to the individual’s vaccination status.
  - Maintain protections for screeners such as transparent barriers that prevent droplet transmission if they do not negatively impact operations.
  - Maintain a list of all staff and facility visitors.
  - Ensure supplies for implementing these measures are available at all building entry points including medical masks, alcohol-based hand sanitizer (minimum 70% alcohol content), tissues, no-touch waste receptacles and disinfectant wipes.
  - Staff must actively self-monitor for symptoms related to COVID-19 and follow measures in the [COVID-19 staff self-checklist and safety checklist](https://www.bccdc.ca).
  - Staff must not come to work if they are experiencing acute respiratory or gastrointestinal symptoms.
  - Post signage at all building entry points to support the active screening process.
    - [Visitor restrictions in place](https://www.bccdc.ca).
    - [Do not to enter if they are sick or required to self-isolate](https://www.bccdc.ca) in accordance with public health directives.
    - Guide symptomatic individuals to perform hand hygiene, put on a medical mask and self-identify to reception or a health-care provider.
    - [Cough etiquette, hand hygiene and physical distancing](https://www.bccdc.ca).
    - [How to put on a face mask](https://www.bccdc.ca).

## Cleaning and Disinfection

- Identify which staff are responsible for cleaning resident care equipment and inform them about all required duties.
- Dedicate reusable equipment and supplies specifically to individual residents with suspected or confirmed COVID-19 infections.
- If dedicating equipment and supplies to an individual resident is not possible, all reusable equipment that is shared between multiple residents must be cleaned and disinfected with a hospital grade disinfectant after each use.
- Items that cannot be easily cleaned and disinfected should not be shared among residents.
- Discard all single-use items into waste bins after use.

Appendix C: How to Collect a Nasopharyngeal Swab

Review the latest BCCDC COVID-19 guidance for testing (see the BCCDC lab testing page). The testing guidance is subject to change and will be updated accordingly. The guidance also specifies the number of samples to be collected from symptomatic residents to confirm an outbreak.

Watch the How to take a Nasopharyngeal Swab video.

Ensure the nasopharyngeal swab (NP) is collected by qualified staff trained in the collection method. Limit staff in the room to those necessary for the procedure. Persons in the room during the procedure should, ideally, be limited to the resident and the staff performing the procedure.

Assemble supplies:
- Recommended collection devices that are routinely used for NP swabs for influenza or other respiratory virus testing.
- Requisition and label.
- Biohazard bag.
- Tissues for resident to clean nasal mucous before the procedure and to contain cough and sneezes after the procedure.

Perform proper hand hygiene. Put on PPE (gown, gloves, medical mask with eye protection, face shield or goggles) to protect yourself if the resident coughs or sneezes while you are collecting the specimen.

Explain the procedure to resident. Provide resident with tissues to contain cough and sneezes after the procedure.

If the resident has a lot of mucous in their nose, this can interfere with the collection of cells. Ask the resident to use a tissue to gently clean out all visible nasal mucous before a swab is taken. Respiratory viruses are located in cells that line the surface of the nasal cavity and are shed into respiratory secretions.

Stand to the side of the resident, not directly in front of them. Seat the resident in a high-fowler’s (700) position in bed with the back of their head supported. It may be necessary to have a second person available to assist with collection.
With a slow, steady motion along the floor of the nose (straight back, not up the nose) advance the swab until the posterior nasopharynx has been reached (distance from nostrils to external opening of ear). If nasal mucosa is swollen, rotating the swab during insertion may facilitate entry.

Place a finger on the tip of the resident’s nose and depress slightly once resistance is met (the swab should pass into the pharynx relatively easily). Rotate the swab twice and allow it to remain in place for a few seconds to absorb the sample, then withdraw the swab.

Move away (at least two metres) from the resident when the procedure is complete. Place in the tube of transport medium (check your local policy for sending specimens). Break the shaft of the swab at the constriction, and screw on the lid without cross-threading. Label the swab with three resident identifiers and indicate “NP Swab.”

Remove PPE according to the steps of doffing (taking off) PPE. Ensure attention to hand hygiene. Complete the virology requisition form requisition indicating the tests requested and write “COVID-19 testing requested” or add a special label to the requisition indicating the need for COVID-19 testing. To prioritize testing, label the requisition as coming from LTC facility (label as "LTCF"). Ensure that the resident identifiers and ordering physician or health-care worker name are correct.

Place the specimen container in a biohazard transport bag. Insert the requisition in the side pouch. Submit samples as you usually do through your local diagnostic microbiology laboratories.
