## Summary

### Antimicrobial and Immunomodulatory Therapy in Adult Patients with COVID-19

There is limited clinical evidence to guide antiviral therapy for patients with COVID-19.

Specialist consultation (e.g., Critical Care, Infectious Disease, Hematology, or Rheumatology) is recommended if any investigational treatment is offered to a patient with COVID-19 outside of approved clinical trials. Informed consent should be obtained from the patient or the substitute decision maker.

### Awards

Enoxaparin 30 mg SC q12h is suggested for VTE prophylaxis.

ACE inhibitors and ARBs should not be discontinued solely on the basis of COVID-19.

NSAIDs should not be discontinued solely on the basis of COVID-19.

### Clinicians

This document is dynamic and addresses key therapeutic areas of concern for clinicians. The complete and most up-to-date version of the guidelines is available at [http://www.bccdc.ca/health-professionals/clinical-resources/covid-19-care/clinical-care/treatments](http://www.bccdc.ca/health-professionals/clinical-resources/covid-19-care/clinical-care/treatments).

### Table: Severity of Illness

<table>
<thead>
<tr>
<th>Severity of Illness</th>
<th>Antiviral Therapy</th>
<th>Antibacterial Therapy</th>
<th>Immunomodulatory Therapy</th>
<th>Other Therapeutics</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Critically Ill COVID-19 Patients</strong>&lt;br&gt; Hospitalized, ICU-based&lt;br&gt; Patients requiring mechanical ventilatory and/or vasopressor/inotropic support</td>
<td>Chloroquine or Hydroxychloroquine is not recommended for the treatment of COVID-19</td>
<td>Ceftriaxone 1-2 g IV q24h x 5 days is recommended if there is concern for bacterial co-infection (alternative: azithromycin 500 mg IV q24h x 5 days)</td>
<td>Dexamethasone 6 mg IV/PO q24h for up to 10 days is strongly recommended (RECOVERY trial), unless higher doses are clinically indicated.** Hydrocortisone 50 mg IV q6h is recommended as an alternative (REMAP-CAP trial). If dexamethasone and hydrocortisone are not available, methylprednisolone 32 mg IV q24h or prednisone 40 mg PO daily are recommended.</td>
<td>Enoxaparin 30 mg SC q12h is suggested for VTE prophylaxis.</td>
</tr>
<tr>
<td><strong>Severely Ill COVID-19 Patients</strong>&lt;br&gt; Hospitalized, ward-based, long-term care&lt;br&gt; Patients requiring supplemental oxygen therapy</td>
<td>Chloroquine or Hydroxychloroquine is not recommended for the treatment of COVID-19</td>
<td>Antibacterial therapy is not routinely recommended outside of approved clinical trials unless other indications justify its use (e.g., suspected bacterial co-infection in COVID-19 positive patients)</td>
<td>Tocilizumab, sarilumab, or anakinra is not recommended outside of approved clinical trials; where clinical trials are not available, it remains unknown whether tocilizumab provides any benefit for treatment of patients with cytokine storm. If treatment is considered, expert consultation is recommended (Infectious Diseases, Hematology, and/or Rheumatology)</td>
<td>ACE inhibitors and ARBs should not be discontinued solely on the basis of COVID-19.</td>
</tr>
<tr>
<td><strong>Mildly Ill COVID-19 Patients</strong>&lt;br&gt; Ambulatory, outpatient, long-term care&lt;br&gt; Patients who do not require supplemental oxygen, intravenous fluids, or other physiological support</td>
<td>Chloroquine or Hydroxychloroquine is not recommended for the treatment of COVID-19</td>
<td>Antibacterial therapy is not routinely recommended outside of approved clinical trials unless other indications justify its use (e.g., suspected bacterial co-infection in COVID-19 positive patients)</td>
<td>Corticosteroids are not recommended outside of approved clinical trials unless otherwise indicated.** Tocilizumab or sarilumab is not recommended outside of approved clinical trials</td>
<td>ACE inhibitors and ARBs should not be discontinued solely on the basis of COVID-19.</td>
</tr>
<tr>
<td><strong>Prophylaxis</strong>&lt;br&gt; Patients with known COVID-19 exposure</td>
<td>Chloroquine or Hydroxychloroquine is not recommended for prophylaxis in patients with known COVID-19 exposure</td>
<td></td>
<td></td>
<td>NSAIDs should not be discontinued solely on the basis of COVID-19.</td>
