COVID-19 Pfizer Vaccine
Shipping, Storage, Thawing and Use Guidelines

A. Shipping:
- Ideally, vaccine will be shipped frozen between -60°C to -90°C or -15°C to -25°C. Any hours used for transport at -25°C to -15°C count against the 2-week limit for storage at -25°C to -15°C.
- Vaccine may be shipped thawed at 2°C to 8°C in exceptional circumstances; maximum of 12 cumulative hours in transport allowable. Any hours used for transport at 2°C to 8°C count against the 31-day (1 month) limit for storage at 2°C to 8°C.
- Single-dose preloaded syringes may be transported in exceptional circumstances.
- Vials should be upright during transport, and tightly packed to reduce jostling of the vials.
- Validated containers must be used for transport.
- Temperature must be monitored continuously during transportation and documented.
- Refer to the Pfizer Transportation Decision Guide if unsure whether to ship vaccine frozen or thawed.

B. Storage:
-60°C to -90°C, Ultra-Low Temperature (ULT) Shipper (frozen):
  - Trays come in thermal packing designed for temporary storage. The shipper can be used for temporary frozen storage for up to 30 days.
  - If using the Pfizer-provided shipper upon receipt and after opening, dry ice should be replenished within 24 hours (maximum of 20-23kg of dry ice pellets; recommended sizes: 9-16 mm). If transferring into a provincially/federally provided shipper, follow guidelines for dry ice replenishment to prepare shipper to store the vaccine.
  - With every re-icing, shipper can maintain ULT storage for 5 days with 2 openings per day of 1 minute or less, i.e. dry ice must be replenished every five days. NOTE: Additional openings of shipper will require more frequent dry ice replenishment (see resource link below).
  - Temperature monitoring must be continually conducted while vaccine is stored in thermal shipper.

-60°C to -80°C, Ultra-Low Temperature (ULT) Freezer (frozen):
  - Can be stored for up to 6 months.

-15°C to -25°C Freezer (frozen):
  - Can be stored and transported at -15°C to -25°C for up to two weeks.
  - Any hours used for transport at -15°C to -25°C count against the 2-week limit for storage at -15°C to -25°C.
  - May be returned one time to the recommended storage condition of -60°C to -80°C.
2°C to 8°C Refrigerator (thawed):
- Can be stored for up to 31 days (1 month).
- Can be transported at 2°C-8°C for a cumulative 12 hours. Any hours used for transport at 2°C to 8°C count against the 1-month limit for storage at 2°C to 8°C.

C. Thawing:
Regular Use
- Approximately 3 hours in the refrigerator to thaw a full tray.
- Thawed vaccine may remain in the refrigerator for up to 31 days (1 month).
- Product needs to reach room temperature prior to dilution.

Immediate Use
- Thaw at room temperature for 30 minutes.
- Product needs to reach room temperature before dilution.

Handling Frozen Vials
- Closed-lid vial trays, or vial trays containing 195 vials removed from frozen storage may be at room temperature for up to 5 minutes.
- Open-lid vial trays, or vial trays containing less than 195 vials removed from frozen storage may be at room temperature for up to 3 minutes.
- If at room temperature for close to, but not over, 3 (partial/open trays) or 5 (full/closed trays) minutes, place back in ULT freezer for 2 hours before packing.
  - If tray is at room temperature for over 3/5 minutes (partial/full, see above), consider it to be thawing and do not place back in freezer. Vials must be stored and moved in a refrigerated (2°C-8°C) container.
- Vial trays returned to frozen storage following room temperature exposure, must remain in frozen storage for at least 2 hours before they can be removed again.
- Individual vials removed from a vial tray and left at room temperature should not be returned to frozen or refrigerated storage and must be thawed for use.
- Thawed vaccine cannot be refrozen.

D. Use
- Vaccine must be diluted within 2 hours after it reaches room temperature.
- Use within 6 hours of dilution.
## E. Vaccine Stability

**Note:** Total amount of time at room temperature is up to 8 hours (2 hours max undiluted + 6 hours max diluted).

Pfizer can also be stored frozen at -15°C to -25°C for up to two weeks. See *Section B: Storage* for details.
F. Helpful Resources

While specific links have been identified below, it is highly recommended that health authorities and sites familiarize themselves with the resources provided by Pfizer at www.cvdvaccine.ca

- Pfizer Covid Vaccine Resources page: https://www.cvdvaccine.ca/resources
- Pfizer Product Storage and Dry Ice webpage: https://www.cvdvaccine.ca/product-storage-and-dry-ice
