## **GLOSSARY**

### **Cumulative Prevalence**

It is also known as Prevalence for Life. Cases meet case definition criteria to qualify in a given year, and are then carried forward to show as a case every year thereafter. This measure is helpful for determining prevalence related to life-long chronic disease, but less useful for conditions that may be episodic (e.g., mood disorders, substance use problem, etc.).

### **Episodic Prevalence**

Cases meet case definition criteria to qualify in a given year, and are then carried forward in all subsequent years with at least one condition-related code including ICD diagnostic codes, procedure codes or drugs in any specific year.

### **Annual Prevalence**

Cases meet case definition criteria to qualify in each given year. Can be used as a quality measure to understand how it compares to cumulative prevalence or how it behaves over time.

### **Annual Service Utilization Prevalence**

Cases meet case definition criteria in a given year by virtue of one hospital diagnosis (MRDX) or one physician claim with diagnosis (first position only). Cases are not carried forward from year to year. This utilization prevalence measure is useful for describing the number of people or proportion of the population using services directly related to the disease.

### **Annual Prevalence with 365 Days follow-up**

Cases meet case definition criteria to qualify in each given year with complete 365 days follow-up time. Can be used as a quality measure to understand how it compares to cumulative prevalence or how it behaves over time.

## CASE DEFINITION – DIABETES MELLITUS

Case Definition Type: Cumulative Prevalence  Episodic Prevalence  Annual Prevalence  Annual Service Utilization Prevalence   
 Annual Prevalence with 365 Days Follow-up

**Case Definition:** The case definition for Diabetes Mellitus requires one hospitalization or two physician visits in one year with diagnostic code(s) specified below; or two or more insulin prescriptions in one year; or two or more oral antihyperglycemic (not including metformin) prescriptions in one year; or one insulin and one oral antihyperglycemic (including metformin) in one year; or 2 metformin prescriptions and 1 physician visit in one year with ICD code(s) specified below. The case definition applies to persons aged 1 and older. Cases of suspected gestational diabetes in women aged 10-54 are not included by excluding hospitalizations, physician claims or prescriptions within the time period 120 days preceding or 180 days after hospital records containing birth-related diagnostic codes (see gestational diabetes exclusion codes below).

Signed-off BC Case Definition: Yes  - V2016 No

**Algorithm:**

1H with ICD code(s) specified below; or 2P in 1Y with ICD code(s) specified below; or 2+Rx insulin in 1Y; or 2+Rx oral antihyperglycemic (not incl. metformin) in 1Y; or 1Rx insulin+1Rx oral antihyperglycemic (incl. metformin) in 1Y; or 1Rx metformin+1Rx oral antihyperglycemic (not incl. metformin) in 1Y; or 2Rx metformin+1P in 1Y with ICD code(s) specified below.

Notes: None

Age Restriction: Age 1 +
