Concepts and Definitions

Economic family - Refers to a group of two or more persons who live in the same dwelling and are related to each other by blood, marriage, common-law or adoption

Family Income – Total income for an economic family

Median Family Income – income value that 50% of families have family income higher and other 50% of families have family income lower than this value

Average Family Income – average value of income of all economic families

Income Inequality – the difference between average family income and median family income with a zero value indicating income is homogeneously distributed, a positive value indicating prosperity concentrates in the high income groups and a negative value indicating opposite a direction

Poverty Line – also known as low-income cutoffs (*LICOs*): income thresholds, determined by analyzing family expenditure data, below which families will devote a larger share of income to the necessities of food, shelter and clothing than the average family would. To reflect differences in the costs of necessities among different community and family sizes, *LICOs* are defined for five categories of community size and seven of family size

After-Tax Poverty Measure— final family poverty status taking into account the added spending power that a family gets from receiving government transfers or its reduced spending power after paying taxes depending on families' income level. All poverty measures in this presentation are based on after-tax financial power

Small Area – areas are considered as small area if the populations are less than 40 persons and thus are suppressed in order to protect confidentiality. Small area does not necessarily small in size of area

Indian Reserve – Indian reserves are usually counted as separate Census subdivisions. However, Statistics Canada does not calculate poverty rates for these areas and thus no poverty data are available for these areas

Top three worse provinces; Top three best provinces

British Columbia – BC has the highest percent of population in poverty and secondary highest percent of children in poverty in Canada. BC has both the third highest median family income and average family income in the nation but income inequity measured by the difference between the two family income values in BC is the third worst after Alberta and Ontario. In other words, BC is the third worst province with more income pouring into the high-income groups.
