Quadrivalent Inactivated Influenza Vaccine (Inactivated Split Virion) (QIIV)
INFLUSPLIT® TETRA Supplier: GlaxoSmithKline Inc.

INDICATIONS:
- See 2020/21 Seasonal Influenza Vaccine Eligibility
- Intended for use in eligible individuals 6 months and older

The vaccine is not approved for use in those less than 6 months of age.

DOSES AND SCHEDULE:
Children 6 months-8 years of age (inclusive): 1 or 2 doses given as 0.5 mL IM.

Children under 9 years of age who have not previously received any seasonal influenza vaccine require 2 doses given 4 weeks apart. If the child has received 1 or more doses in any previous season, only a single dose is required. For children requiring 2 doses within the season, QIIV or TIIIV may be given interchangeably with LAIV-Q for the 1st or 2nd dose if LAIV-Q is not available.

Children and Adolescents 9-17 years of age (inclusive): 1 dose given as 0.5 mL IM.

Adults 18 years of age and older: 1 dose given as 0.5 mL IM.

ADMINISTRATION:
No additional requirements.

BOOSTER DOSES AND RE-IMMUNIZATION:
Annually.

SEROLOGICAL TESTING:
Serological testing is not recommended before or after immunization.

CONTRAINDICATIONS:
1. History of anaphylactic reaction to a previous dose of any type of influenza vaccine or to any component of INFLUSPLIT® TETRA.
2. History of Guillain-Barré syndrome (GBS) within 8 weeks of receipt of a previous dose of influenza vaccine without another cause being identified.
3. Receipt of a CTLA-4 inhibitor (e.g., ipilimumab) alone or in combination with other checkpoint inhibitors for the treatment of cancer. Inactivated influenza vaccine should be given 4-6 weeks before starting treatment or 4-6 weeks after the last dose. For more specific details refer to the BC Cancer Influenza vaccine recommendations.
Quadrivalent Inactivated Influenza Vaccine (Inactivated Split Virion) (QIIV)
INFLUSPLIT® TETRA Supplier: GlaxoSmithKline Inc.

PRODUCT COMPONENTS:
Potential allergens: ovalbumin, polysorbate 80, gentamicin sulphate (See SPECIAL CONSIDERATIONS).
Other components: disodium phosphate dodecahydrate, potassium dihydrogen phosphate, potassium chloride, magnesium chloride hexahydrate, α-tocopheryl hydrogen succinate, octoxinol 10, formaldehyde, sodium deoxycholate.

PRECAUTIONS:
Severe oculo-respiratory syndrome (ORS) after a previous dose of influenza vaccine. A

SPECIAL CONSIDERATIONS:
Egg allergic individuals (including those who have experienced anaphylaxis following egg ingestion) can be immunized with inactivated or live attenuated influenza vaccine in any setting attended by immunization service providers who are following standard vaccine administration practice. B

ADVERSE EVENTS:
Local: pain, swelling, redness, induration.
Systemic: myalgia, headache, fever, malaise, arthralgia, sweating, shivering, nausea, vomiting, diarrhea. Infants and toddlers may also experience irritability, loss of appetite and drowsiness. Fewer than 1 in 20 people may develop oculo-respiratory syndrome (ORS). Symptoms include red eyes, a cough, and/or sore throat and/or hoarseness.

A See Safety Issues Applicable to Influenza Vaccines, 2. Oculo-Respiratory Syndrome (ORS).
