

BC Influenza Surveillance

2017 - 2018 Season

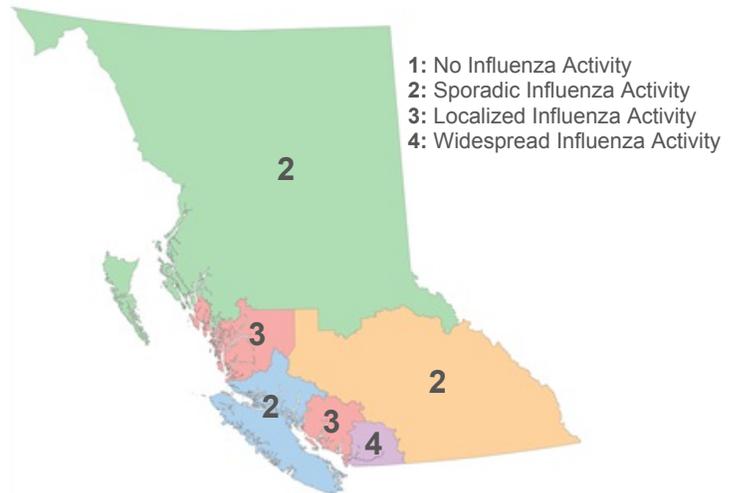

Week 6 (February 4 to February 10, 2018)

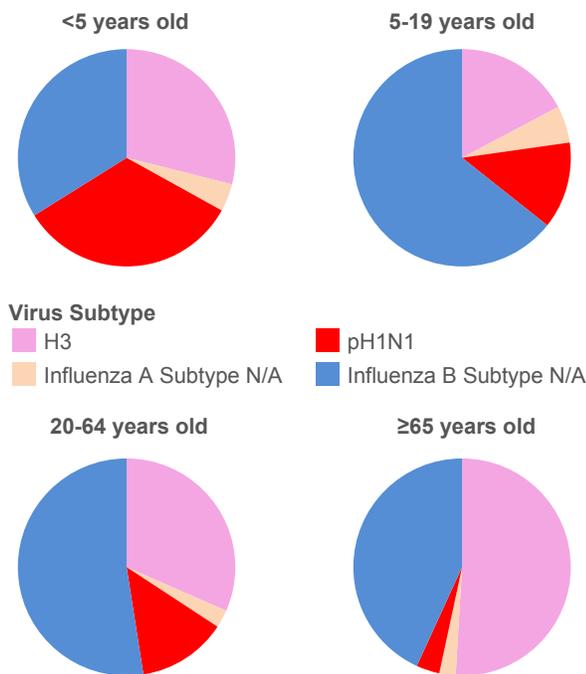

BC Centre for Disease Control
An agency of the Provincial Health Services Authority

- The epidemic peak has passed but influenza activity remains above seasonal levels in BC
- Influenza positivity at the BCCDC Public Health Laboratory continued to decline, falling to 30% in week 6 from a peak of more than 50% in week 52
- This trend was driven by declining A(H3N2) activity
- Influenza B has predominated among influenza detections (65%) this week with activity levels for type B remaining stable

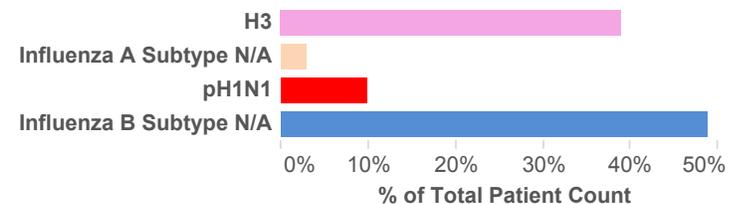

Influenza Activity Level by Health Authority

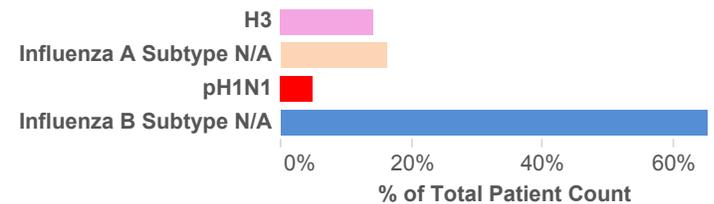

Virus Subtype by Age (2017-18 Season YTD)

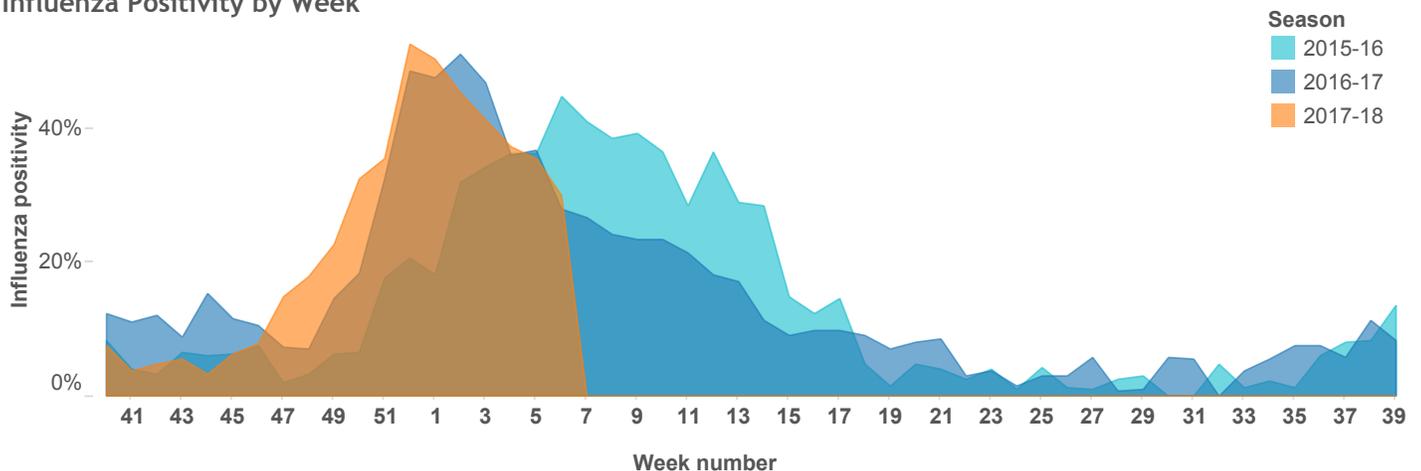

Virus Subtypes (2017-18 Season YTD)

Virus Subtypes (Week 6)

Influenza Positivity by Week

Note: Week 40 corresponds to the first week of October. Data Source: BCCDC Public Health Laboratory; current to February 14, 2018.
