BC Influenza Surveillance
2017 - 2018 Season
Week 14 (April 1 to April 7, 2018)

- Ongoing, low level influenza activity continues in BC
- Although some surveillance indicators remain elevated for this time of year, influenza activity has declined substantially following the epidemic peak
- Influenza positivity at the BCCDC Public Health Laboratory declined to 22% in week 14
- Influenza B comprised more than half (57%) of all influenza detections in week 14
- Among influenza A detections, A(H3N2) remains the dominant subtype; however, A(H1N1)pdm09 has also been detected

Influenza Activity Level by Health Authority
1: No Influenza Activity
2: Sporadic Influenza Activity
3: Localized Influenza Activity
4: Widespread Influenza Activity

Virus Subtype by Age (2017-18 Season YTD)

Influenza Positivity by Week
Note: Week 40 corresponds to the first week of October. Data Source: BCCDC Public Health Laboratory; current to April 11, 2018.
