Influenza-like illness activity was consistent with expected seasonal levels for this time of year.

In week 47, influenza positivity at the BCCDC Public Health Laboratory reached 13%, with a mix of influenza types A and B detected.

Influenza B detections have trended upward in recent weeks and are greater than in previous years.

Among influenza A detections, A(H3N2) remains the dominant subtype so far this season.

Enteroviruses were the most frequently detected non-influenza respiratory virus.
